Guide1

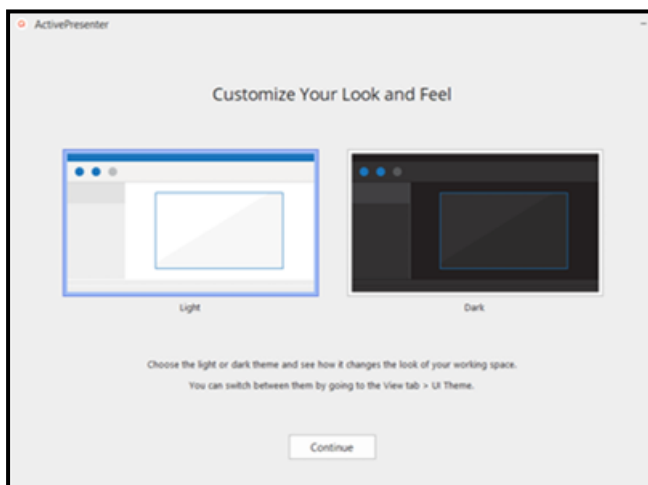

It consists of ActivePresenter Overview. Steps required for creating the projects.

Introduction

APContent is the ultimate eLearning software with advanced video recording and editing features. It allows you to create various eLearning content types such as video demos, software simulations, quizzes, and games. Using responsive design and HTML5, your content is truly device-independent – it looks good and runs perfectly on any modern web browser and device. The SCORM- and xAPI-compliant outputs also integrate seamlessly with the most well-known Learning Management Systems.

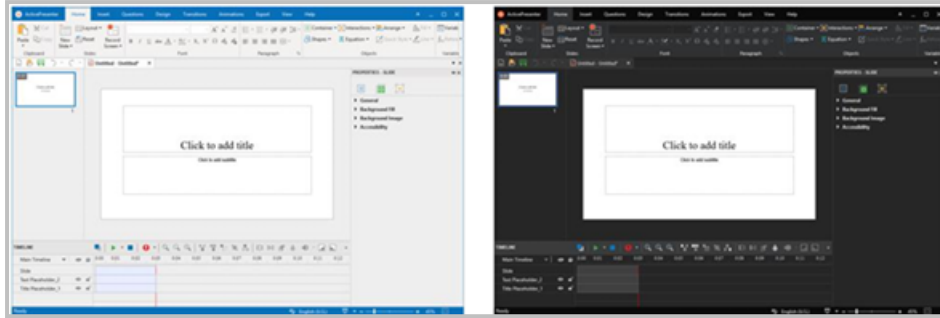

UI Theme

ActivePresenter 7 supports both light theme and dark theme for your liking, which lets you customize your look and feel. On the first launch after you successfully installed ActivePresenter 7, this dialog will appear:

Workspace

ActivePresenter workspace also comes up with the theme that you've chosen. To change the look of the workspace from light to dark and vice versa, click the **View** tab > "UI Theme" above.

Creating Projects

A blank project is a project that contains blank slides where you can add content such as images, video/audio clips, and slides from ActivePresenter projects or PowerPoint presentations. You can also add new recorded slides to a project by recording screen as video or as software simulations.

- To create a blank project, on the Start Page > **Blank Project**. Alternatively, in the open project window, click the **ActivePresenter** button > **Blank Project**. ActivePresenter will launch a new project with the default theme.
- By default, the new project will have one blank slide with the layout corresponding to the theme. You can add more slides by clicking the **Home** tab > New Slide, or in the Insert tab > New Slide. The new slide will be inserted after the slide that you are selecting.

If you want to create a new slide with a different layout, click the arrow on the New Slide button and select a slide layout from the drop-down list.

Recording Projects

You can use ActivePresenter to record the computer screen to create a video demo to show how your products or services look like. A recorded project captures truthfully all live actions on the screen along with mouse and keyboard actions while you are interacting with the target application.

To record a new project, do one of the following:

- On the Start Page, click [Record Video](#).
- In the open project window, click the ActivePresenter button > Record Video.

Guide2

Guide 2 helps to understand the working with slides and the required themes.

Working with Themes

A theme is a set of design elements, including colors, fonts, background styles, and layouts. Using themes is a quick way to give your slides a consistent and attractive look and feel.

A design theme consists of:

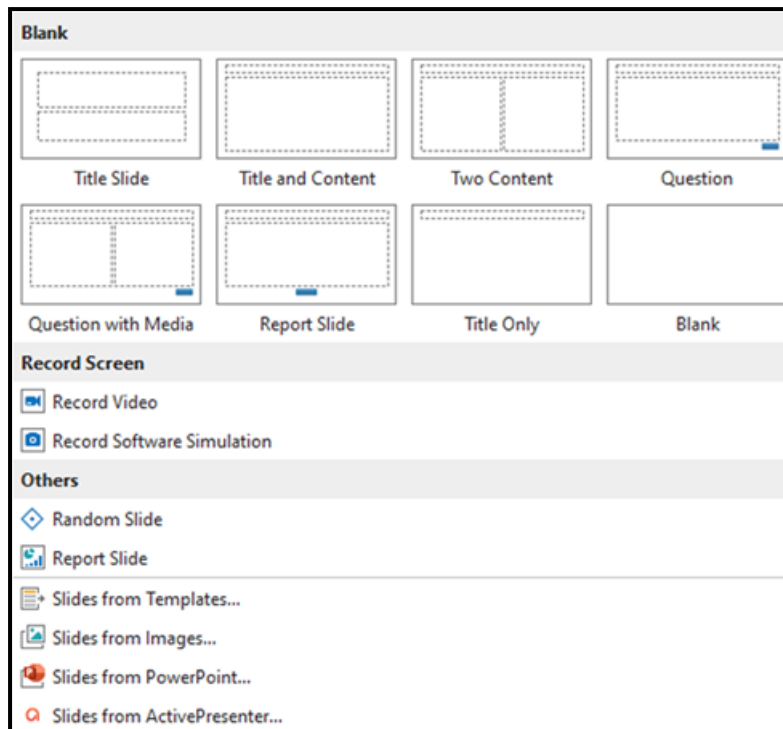

- A set of theme colors that contains four text and background colors and eight accent colors for objects.
- A set of theme fonts that contains fonts for the heading and body text.
- A set of twelve preset background styles that defines the color of the slide background.
- A slide master that defines the formatting and placement of text and objects in a slide. Each slide master has a master layout and a set of custom layouts. If you use more than one theme in your project, that project will have more than one slide master (and sets of layouts).

Inserting Slides

Inserting slides is a very basic step when working in ActivePresenter. There are several different ways to insert slides, from inserting a new slide to copying slides from other projects.

This is a snippet

To insert a new slide, in the Home tab or the Insert tab, click the arrow on the New Slide button and select a slide from the slide gallery.

Container

In responsive projects, you can make objects respond to different viewports using the **Transform** properties (go to the **Properties** panel > **Size & Properties** > **Transform**). However, this way may take a lot of effort to make even a simple responsive project as you have to do it manually.

- In ActivePresenter 8, there is another way to make it easier than using a container (flex box or grid box). Objects inserted in a container can be laid out and aligned automatically so adapt different viewport sizes. Thanks to that, you don't need to change their size and position manually.

Property	Description
Project Name	The name of your project
Content Type	The type of content you want to create (e.g. blog post, video, etc.)
Target Audience	The intended audience for your content
Keywords	The keywords or phrases that your content should focus on
