Working with Themes

A theme is a set of design elements, including colors, fonts, background styles, and layouts. Using themes is a quick way to give your slides a consistent and attractive look and feel.

A design theme consists of:

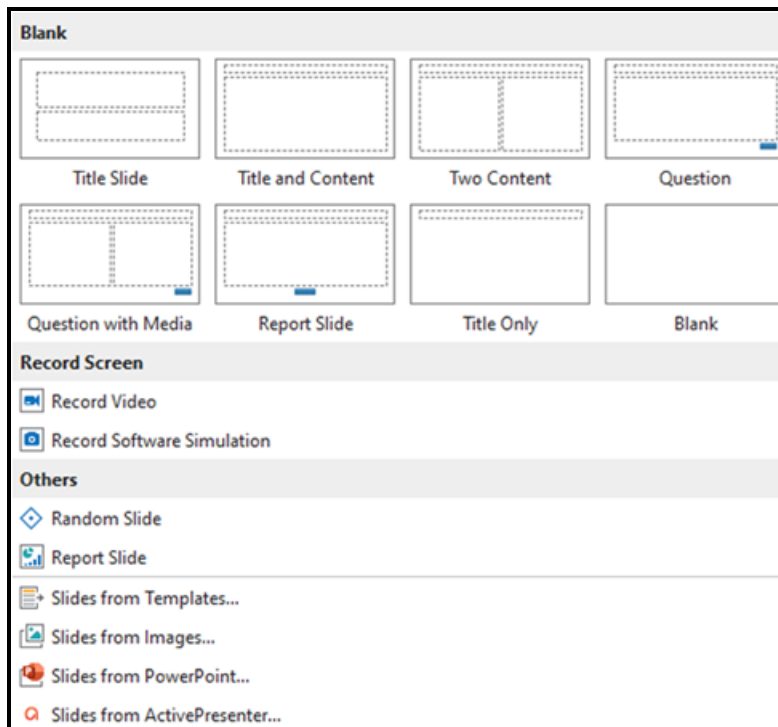

- A set of theme colors that contains four text and background colors and eight accent colors for objects.
- A set of theme fonts that contains fonts for the heading and body text.
- A set of twelve preset background styles that defines the color of the slide background.
- A slide master that defines the formatting and placement of text and objects in a slide. Each slide master has a master layout and a set of custom layouts. If you use more than one theme in your project, that project will have more than one slide master (and sets of layouts).

Inserting Slides

Inserting slides is a very basic step when working in ActivePresenter. There are several different ways to insert slides, from inserting a new slide to copying slides from other projects.

This is a snippet

To insert a new slide, in the Home tab or the Insert tab, click the arrow on the New Slide button and select a slide from the slide gallery.

Container

In responsive projects, you can make objects respond to different viewport using the **Transform** properties (go to the **Properties** panel > **Size & Properties** > **Transform**). However, this way may take a lot of effort to make even a simple responsive project as you have to do it manually.

- In APCA 8, there is another way to make it easier than using a container (flex box or grid box). Objects inserted in a container can be laid out and aligned automatically so adapt different viewport sizes. Thanks to that, you don't need to change their size and position manually.

Property	Description
Project Name	The name of your project
Content Type	The type of content you want to create (e.g. blog post, video, etc.)
Target Audience	The intended audience for your content
Keywords	The keywords or phrases that your content should focus on
